SUMMARY

Full Stack Developer with 4+ years building web applications, REST APIs, AI-powered features and Android apps with TypeScript, React, Next.js, Node.js and Flutter. As a freelancer, delivered 30+ projects for 20+ international clients and kept a 5.0/5 rating across all 23 Fiverr reviews. Currently building e-commerce dashboards, healthcare scheduling integrations and AI agent features as a contract developer with Krazy Software Solutions.

SKILLS

Languages: TypeScript, JavaScript, Dart, Kotlin, Python, SQL, HTML, CSS
Frontend & Mobile: React, Next.js, Tailwind CSS, EJS, Flutter, Riverpod, Android (Google Play)
Backend: Node.js, Express.js, REST APIs, Auth0, Supabase Auth, Firebase Auth, WebRTC, Discord.js
Databases & AI: PostgreSQL, Prisma, MongoDB, Supabase, Firebase, SQLite | LLM APIs, AI agents
Integrations & Tools: GoHighLevel (GHL) API, Dentally API, Git, GitHub Actions CI/CD, Vercel, Postman, npm, CLI tooling

EXPERIENCE

Full Stack Developer (Contract) | Krazy Software Solutions — Feb 2026 – Present

- Build features for an e-commerce admin dashboard with Next.js, React, TypeScript and PostgreSQL/Prisma, including sortable, filterable order tables and product and user-profile settings.
- Integrated a dental appointment booking website with the GoHighLevel (GHL) and Dentally APIs, keeping appointment data synchronized across both systems.
- Develop AI agent features using LLM APIs in a Next.js and TypeScript application.

Freelance Full Stack Developer | Self-Employed (Fiverr and direct clients) — May 2022 – Present

- Delivered 30+ projects for 20+ international clients, maintaining a 5.0/5 rating on all 23 Fiverr reviews (Level 1 Seller) and earning repeat orders from ongoing clients.
- Built and deployed custom Discord bots with Node.js, Discord.js and MongoDB for moderation, games, team matching and AI automation, serving communities of 1,000+ members.
- Developed Node.js and Express REST APIs and web dashboards with authentication, real-time updates, database integration (MongoDB, Firebase) and third-party API integrations.
- Owned each project end to end: requirements with the client, build, deployment and ongoing maintenance.

PROJECTS

Scrovel | Web novel platform (Android + Web) | *Flutter, Riverpod, Supabase, REST API, Next.js* — Live on Google Play

- Built and published a full-stack reading platform with a reel-style story feed, distraction-free reader and a companion Next.js web app.
- Implemented author publishing tools, paragraph-level reading progress sync, library search, Supabase email/Google sign-in, and content reporting and user blocking.

Oddball | Physics video maker for Android | *Flutter, Dart, Kotlin, MediaCodec* — Live on Google Play

- Built and published an app that renders seeded physics simulations into videos with synthesized sound, encodes them on-device with Android's hardware encoders via Kotlin, and posts to Instagram Reels in one tap.

Envidence | Developer CLI published on npm | *TypeScript, Node.js, SQLite* — envidence.prasant.dev

- Built a cross-platform CLI (Windows, macOS, Linux) that snapshots the machine state Git ignores (PATH, runtimes, global packages, services, ports) and compares it around a failing command, separating what changed during the run from what changed since it last passed.
- Ranks likely causes with before/after values, writes restore plans that change only user-level settings and can be undone, and exports self-contained HTML reports. Fully local with no telemetry, and tested in CI on Windows and Linux.

Scrovel Animation | 2D animation studio for Android | *Flutter, Riverpod, Drift/SQLite, LLM APIs* — Live on Google Play

- Built an offline-first animation app with a custom rendering engine, bone rigging with 2-bone IK, keyframes with easing, layers, audio and MP4/GIF export, plus an LLM-powered AI assistant that draws and animates editable strokes.

Noveler | Character tracking for writers | *Node.js, Express.js, EJS, Firebase, Auth0* — noveler.vercel.app

- Built a server-rendered web app where authors create, edit and track how their characters change across novels and other projects, with Auth0 login and Firebase storage.

EDUCATION

B.Tech, Computer Science Engineering & Application | SUIIT, Sambalpur University, Burla, Odisha — 2021 – 2025
